

# MOVETHICS QUICK CHECK - METHODOLOGY

## v1.0

**The Quick Check is an indicative self-assessment of observable practices. It is not an audit, legal opinion or certification. It produces a Relationship Practice Score and a Chain Visibility Score.**

### Scoring

Context questions do not reduce the score. Practice answers are weighted by materiality. Critical legal/safety/red-line issues carry more weight. “I do not know” primarily reduces visibility, not practice.

### Bands

| Score  | Interpretation               |
|--------|------------------------------|
| 85-100 | Strong safeguards            |
| 70-84  | Generally balanced           |
| 50-69  | Several practices to review  |
| 0-49   | Material exposure identified |

### Two scores, not one moral label

Relationship Practice Score = quality of safeguards in the answers. Chain Visibility Score = how well the respondent can actually see who performs the transport, how the chain is subcontracted and where key conditions sit. A company can be operationally strong and still have poor visibility.
